Summary

Backend-focused full-stack developer (Node.js, TypeScript, PostgreSQL) who designs and ships complete applications end to end: schema design, REST APIs, authentication, tenant isolation, and deployment. Built and deployed Chronicle, a two-service publishing platform with schema-validated AI tooling, and DevGuard AI, a GitHub App for automated pull request review. Currently building Sovereign, a multi-tenant B2B SaaS platform on PostgreSQL Row-Level Security. Seeking a Full-Stack or Backend Developer role in Delhi NCR or remote.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3, Python (basic)
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Zod Validation, Prisma ORM, Inngest, WebSockets, Server-Sent Events
Frontend: React, Next.js 15 (App Router, ISR), Tailwind CSS, Framer Motion
Databases: PostgreSQL (Row-Level Security, pgvector), MongoDB, Redis (Upstash), Supabase
AI Integration: Gemini API, Groq API, Tool-Calling Agents, Structured JSON Output, Multi-Provider Fallback
Tools & DevOps: Git, GitHub Actions (CI/CD), Vitest, Turborepo, Vercel, Render, Docker (basic), Linux CLI

Experience

Full-Stack Developer (Self-Employed) **Feb 2025 – Present**
Independent Projects *Remote*

- Design, build, and deploy full-stack applications end to end across Next.js (Vercel) and Express (Render) with PostgreSQL (Prisma) and MongoDB, owning schema design, REST APIs, authentication, CI, and production deployment.

Projects

Sovereign — Multi-Tenant B2B SaaS for AI Workflow Agents **Oct 2026 – Present (in development)**
Source: github.com/rajendrabist07/sovereign

- Architecting a backend-heavy, multi-tenant platform in a Turborepo monorepo where organizations define autonomous AI workflow agents; PostgreSQL Row-Level Security enforces tenant isolation at the database layer, alongside role-based access control, audit logging, and quota enforcement.
- Built workflow execution on Inngest for durable, resumable, and idempotent runs, with human-in-the-loop approval steps before sensitive agent actions.
- Implemented an agent executor with a tool-calling loop (database queries, webhook execution, text classification); the LLM is treated as an untrusted dependency via JSON-mode requests, Zod-validated outputs, hard timeouts, and prompt-injection tag defenses.
- **Stack:** TypeScript, Turborepo, PostgreSQL (RLS), Inngest, Zod

Chronicle — Publishing Platform with Schema-Guarded AI Tools **Sep 2026**
Live: chronicle-platform.vercel.app | Frontend: github.com/rajendrabist07/chronicle | API: github.com/rajendrabist07/content-platform

- Built and deployed a two-service platform: Next.js frontend on Vercel and Express REST API (JWT) on Render backed by PostgreSQL via Prisma; public pages use server rendering with Incremental Static Regeneration for crawlable SEO.
- Treated Gemini as an untrusted dependency: JSON-mode requests, Zod validation, normalized tags, and hard timeouts; malformed output returns a safe 503 instead of corrupting editor state.
- Implemented email-verified accounts with transactional email (Brevo) sent asynchronously with retry backoff, and boot-time Prisma migrations that abort startup on failure to prevent schema drift.
- **Stack:** Next.js 15, TypeScript, Express, Prisma, PostgreSQL, Gemini 2.5, Brevo, Vitest, GitHub Actions

DevGuard AI — Autonomous PR Security & Code Review Agent **Aug 2025**
Live: dev-guard-ai.vercel.app | Source: github.com/rajendrabist07/dev-guard-ai

- Built a GitHub App with an LLM tool-calling loop that runs AST-based security linting and OSV.dev CVE scanning before producing severity-tagged findings posted as inline PR comments via the Checks API.
- Designed three-path model failover (Groq → Gemini → rule-based engine); hardened with HMAC-verified webhooks, Zod validation, Redis rate limiting, and secret redaction in logs.
- Added a Vitest test suite, GitHub Actions CI (typecheck, lint, test, build), and Sentry error tracking.

Education

Diploma in IT (Full-Stack Web Development) **2025 – 2026**
Vcare Technical Institute — Node.js, Express.js, React, MongoDB, REST APIs *India*
Higher Secondary (+2 Science, Class XII equivalent) **2022**
Kailali Multiple Campus *Nepal*

Additional Information

Work Authorization: Nepali national; eligible to work in India without a work permit under the India-Nepal treaty
Availability: 1 month notice; Delhi NCR or remote **Languages:** English, Hindi (Proficient), Nepali (Native)
